Herman Kurrelmeier

Technical Instructions:

1. First we have to get approval from the university and the funding board for the project.
2. Next we must add electronic turnstiles to the entrance and exits of every dining hall on campus. To do this the university would have to purchase more turntables.
3. Once the turntables have been purchased, facilities would have to install them in all the entrances and exits that don’t already have them.
4. Next we will have to contact UITS about creating the One.IU app.
5. After meeting with them we would have to collaborate with UITS on the design of the app.
6. Next we would help them program the app and so that it contained everything we wanted it to.
7. Once it has been programmed, we would roll it out on One.IU.
8. After that, we would run some campaign raising awareness towards the app.
9. Along with that we would give guidance on how to properly use the app and utilize all of its resources.
10. Once all that has been completed we would work on updating and adding to the app so that it can be as useful as possible.
