Businesses across the globe go through change constantly. Today businesses have been working hard to evolve. Companies these days need to keep moving or else they will be out of business within a blink of an eye. Business X-100 runs through concepts that will be applicable to the world of Business in 2022. One of the common misconceptions of this class is that we are learning about jobs and business today. We look to learn about the future because Business today is nothing compared to what it will be like by the time students graduate. The concept of Future Business is something that Professor Myron Kanning speaks on constantly. Change in the world of business is increasing, and as time goes on this rate of change will increase ever further.

ArticleBusiness.com describes the future of Business as a “rapidly changing market that experiences breakthroughs and growth every day.” Those who are reluctant to change will be “left in the dust”. ArticleBusiness.com is a cite that helps businesses gain a better understanding of how their companies can improve in the future. New entrepreneurs have been able to combat today’s unstable environment of business world. Software Security is something that future businesses will have to pay attention to. New technology is evolving every day and it is imperative that our devices remain safe. All the way down to “critical aspects of your automobile can be hacked with.” Variables such as tire pressure and brake systems are rooted back to computer systems in today’s automobiles. In today’s world companies that are cautious of the environment are going to have success. ArticleBusiness.com also claims that “Financial giants
like Warren Buffet and Bill Gates are investing their wealth into renewable energy companies.”

The final component of the future in Business is 3D Printing. 3D Printing is a new concept that creates objects in a very short period. For businesses, this opens a new world in manufacturing. Printing models could evolve into life changing technology that can cure disease. Overall businesses are changing most in their technology platforms. Access to customer data, and economic trends have become more prevalent than ever. This increased tech and accessibility has caused exponential change in the business world. This trend will only increase as we move further into the future.

Future Business is a concept that doesn’t have a tangible definition. It is very open ended. There are many variables that make up the Future of Business. Companies in the future will have to deal with three main disruptors: Tech, Globalization, and Collaboration. These disruptors did not exist in Business in the past. For example, in college student’s parent’s generation businesses did not rely on technology nearly as much. Globalization is another part to Future Business; many companies are crossing boarders from country to country. For example, the software for the iPhone is created in Cupertino, but the hardware is created in China. Future Businesses are looking to take these disruptors head on. If they can combat tech, globalization, and collaboration, they will succeed in the future. Companies that produce high results follow a set of rules that to translate high results and future success. Good Companies have the innate ability to change, innovate and grow. They also have a narrow focus within the company. From the CEO to the interns, the entire company understands their goals. Another rule that CEO’s follow is that he/she challenges the entire company to stay involved and find solutions. The last method is to share the company gains with your employees. This incentivizes hard work within companies.
We are living in exponential times and the future is only getting faster. This speed of change is backed by tech, globalization, and collaboration.

The future is everything to college students. In Business X-100 Myron Kanning shows the importance of looking to the future and not the present. The concept of Future Business is something that more companies should take note of. The understanding of this concept will help them survive over the next 10-20 years.
