Creating art is one of the hobbies that I enjoy doing in my free time. Art is a great way to release stress in a healthy and productive way. I really enjoy either sketching or painting. When sketching I tend to draw more inanimate objects that have a definite shape as it is easier to show the definite lines of the object. When painting I like to draw living things such as animals and people because the paint almost seems to bring the subject to life. I was attracted to art at a young age and continued to work on my skills at any chance I could get. This talent was always encouraged by my family. I took a lot of art classes when I was younger and my passion for the hobby has continuously grown throughout my life. My uncle is an artist and is constantly teaching new techniques that can be used to make a picture come to life on the page.

There is a digital artist that was able to create a screen that allows the viewer to turn into a bird of sorts. There are different things that happen in each window that the viewer stands in front of. By using programming and other technologies, the artist is able to transform the shadow of a person to that of a bird. In one of the windows, he even has the shadow of the person “disintegrate into a flock of birds” (Rieland, Randy). This innovative technology shows that artists are constantly coming up with new ways to show their unique creativity with the world. Technology is helping artists express themselves in ways that people never thought possible. This technology has changed my idea of what an artist can be. With new technologies emerging every day, I now think there are endless ways to see technology in the art field. I was a
bit skeptic about just how much technology and art could be intertwined, but after reading this article, I have found that art is a useful hobby that be integrated into any industry in some way or another.

I think that technology can only continue to help those who are interested in art and design. With all of the new inventions that people are coming up with, there are endless possibilities as to what could be created. I do see technology altering art in a way that most would not be able to find possible. I do not think this is a bad thing though. I feel that we are coming upon a new era where art is more technological than ever.
