1. The Scoria Rock (Igneous Rock) ------- First, this rock is dark color. Second, it has many vesicles, and I smelled the rock is like smokey. Also i found the a rock was a volcano from china. Now, we talk about how does Scoria rock form when magma containing abundant dissolved gas flows from a volcano or is blown out during an eruption. If the pressure upon it is reduced and the dissolved gas starts to escape in the form of bubbles.

2. The Granite Rock (Igneous Rock) ------- It is a light colored, and have many grains. Also it is composed mainly of quartz and feldspar with minor amounts of mica,
amphiboles, and other minerals. However, I found the Granite from my house’s floor tiles.

3. The Mudstone Rock (sedimentary Rock) --------- The color is grey, it’s soft. When I touched it, it is smooth. Also I can see it’s consisting of a mixture of clay and silt-sized particles. I found the a rock was under the soil. extensive occurrence the North Island.

4. The Gabbro Rock (Igneous) It’s Black color or dark green. The minerals plagioclase and augite. Also It’s touch like medium to coarse grained ------phaneritic. I found the rock from bayside’s Park.
5. The Limestone Rock (Sedimentary Rock) light silver. It most commonly forms in clear, warm, shallow marine waters. Also an organic sedimentary rock that forms from the accumulation of shell, coral, algal, and fecal debris. However,

6. The Diorite Rock (Igneous Rock) It’s speckled black and white color. When I touched is like medium to coarse grained phaneritic. I found this from my friends. He did it from Chinese volcanic. Also it is produced in volcanic arcs and it’s hard.
7. The Obsidian Rock (Igneous rock) It’s dark green color and smooth uniform texture that breaks. Also obsidian has an iridescent. I found from my hometown. How is the Obsidian form:
- along the edges of a lava flow (extrusive)
- along the edges of a volcanic dome (extrusive)
- around the edges of a sill or a dike (intrusive)
- where lava contacts water (extrusive)
- where lava cools while airborne (extrusive)
Obsidian from Glass Butte

8.
